Bonsai-An Art of Living डी.के.ए.एस.सी. मध्ये वनस्पतीशास्त्र विभागाची  
ऑनलाइन कार्यशाळा संपन्न

### डी.के.ए.एस.सी. मध्ये वनस्पतीशास्त्र विभागाची ऑनलाइन कार्यशाळा संपन्न

इचलकरंजी -येथील डी. के. ए.एस.सी.महाविद्यालयाच्या वनस्पतीशास्त्र विभागाच्यावतीने अगणी महाविद्यालययोजने अंतर्गत \*'Bonsai :An Art of Living'\* या विषयावर ऑनलाइन कार्यशाळा पार पडली. या कार्यशाळेत प्रा. डॉ.धनश्री पाटील यांनी व्याख्यान देऊन प्रात्यक्षिकाचे सादरीकरण केले. प्रा.धनश्री पाटील कार्यशाळेमध्ये मार्गदर्शन करताना म्हणाल्या, \*बोन्साय कलेला मोठी संधी आहे. यातून रोजगारही निर्माण होऊ शकतो. प्रशिक्षण दिल्यास रोजगाराची हमी देता येऊ शकते.\* कार्यशाळेच्या अध्यक्षस्थानी महाविद्यालयाचे प्रभारी प्राचार्य डॉ. व्ही. एस. ठेकळे होते.कार्यक्रमासाठी प्रमुख पाहुणे म्हणून शिवाजी विद्यापीठ वनस्पतीशास्त्र विभागप्रमुख प्रा.व्ही.डी.जाधव होत्या. पाहुण्यांचा परिचय वनस्पतीशास्त्र विभागप्रमुख डॉ.एस्.टी.इंगळे.यांनी करून दिला. कार्यक्रमाचे प्रास्ताविककार्यशाळेच्या संयोजिका डॉ.एम.वाय.शिंदे यांनी केले. आभार डॉ.एस्.के. गावडे यांनी मानले.या कार्यक्रमासाठी वनस्पतीशास्त्र विभागातील प्राध्यापिका डॉ. ए. व्ही. कट्टी .कु.आरती खोत. सौ.दोपारे,सौ.उर्मिला चौगुलेउपस्थित होते.कार्यक्रमात या कार्यशाळेत क्लस्टर अंतर्गत महाविद्यालया तील दोनशेहून अधिक विद्यार्थ्यांनी सहभाग नोंदवला होता.

All participants and resource person in online workshop on Bonsai Art of living

## **Workshop: "Bonsai, The Living Art"**

**Date:- 08/01/2022**

An online workshop titled "**Bonsai: An Art of Living**" was successfully conducted by the Department of Botany, D. K. A. S. C. Ichalkaranji, under the Pioneer University Scheme. In this workshop, **Prof. Dr. Dhanshree Patil** delivered a lecture and presented a live demonstration. While guiding the participants, **Prof. Patil** emphasized, *"Bonsai art offers vast opportunities and has the potential to generate employment. Proper training can ensure job prospects."*

The workshop was presided over by the acting principal of the university, **V. S. Lumps**, with the Head of the Department of Botany at Shivaji Vidyapeeth, **Prof. V. D. Jadhav**, introducing the guests. The introductory remarks were made by the Head of the Department of Botany, **Dr. S. T. Ingles**, and the workshop coordinator was **Dr. M. Y. Shinde**. The vote of thanks was given by **Dr. S. K. Gawde**.

The event was supported by **Prof. A. V. Katti**, **Ms. Aarti Khot**, **Ms. Urmila Chougule**, and other faculty members. More than 200 students from various colleges under the cluster participated in the workshop.

## REPORT BONSAI WORKSHOP

### What you need to follow this Bonsai tutorial?

It's also important to use quality tools and materials. Here is a list of what you will need.

- **Bonsai plant**
  - Bonsai plants or bonsai trees are available in most bonsai nurseries and also from online stores. There are a variety of trees that can be made into bonsai and the key is to understand how trees grow and how to take care of these trees as well.
- **Bonsai Pot**
  - You need the right kind of pot to grow your bonsai. Traditional pots may be plain, may be wide with a circular, triangular or rectangular shape. It must have adequate drainage to remove excess water and fertilizer to drain away from the roots.
- **Bonsai potting soil**
  - Potting soil that is perfect for bonsai growing is available from garden stores and bonsai nurseries locally and online. Potting soil is usually soil that has good nutrient and water absorption properties. You need soil with good aeration. You need soil that can retain water and nutrients and drain the excess.
- **Aggregates**
  - You must improve the drainage and aeration properties of your soil by using aggregate materials. These are small pieces of rocks and materials that are placed at the bottom of the pot. These will let excess water to drain and will let oxygen enter the soil. You can purchase aggregate materials from local garden shops or from bonsai nurseries as well.
- **Water**
  - You must use clean and safe water on your bonsai plants. You may use rainwater or tap water but this has to be clean water which won't pose any risk to your bonsai plants. Have your water tested for quality and safety before watering this on your bonsai if you are unsure.
- **Balanced fertilizer**
  - Your bonsai should be fed balanced fertilizer to recuperate. On the other hand, some trees need specific fertilizer formulas. You can purchase this type of fertilizer from bonsai nurseries, garden shops, and garden centers.
- **Pruning shears**
  - Pruning shears will let you prune and trim your bonsai depending on the style you wish to achieve. There are many kinds of pruning shears but always use clean or sanitized shears to stop the spread of disease or molds from one area of the plant to another.
- **Wire**
  - You need the ideal wire to train your bonsai to the style you want. Wires come in a variety but only two are commonly used: aluminum and annealed copper. Aluminum wires are for bonsai with young branches while strong annealed copper is for older and thicker branches and trunks. Wires are also available in different gauges from as thin as 1 mm to 4 mm thick.
- **Pliers**
  - You need a good pair of pliers to cut the wire and to remove it after training is over. A good pair of pliers is also needed to trim tough roots, branches, and trunks, especially on mature trees.

growth in the roots. Water only with clean water, whether you use rainwater or tap water. If you are in doubt, you can have your water tested before using this on your bonsai.

- Re-pot your bonsai according to the ideal re-potting schedule for the tree species. Generally, fast-growing trees need to be re-potted at least yearly to make up for the growth of the roots. Slow-growing trees should be re-potted at least two to three years.
- Replace the bonsai soil when you re-pot. Never reuse soil when you re-pot. Always use new soil with fresh nutrients.
- Feed your plants with the right nutrients

As there is a wide variety of trees that you can turn into bonsai, the nutritional requirements of each one vary as well. This is where good research of the needs of the tree comes in very handy. You must look for the ideal fertilizer that will work best for your tree. The ideal fertilizer for most bonsai trees is a balanced N-P-K fertilizer. The letters stand for the most important nutrients that plants need: Nitrogen, Phosphorous, and Potassium. There are different formulations of N-P-K in a variety of fertilizer. You must identify the right combination of N-P-K that is right for your kind of tree. Also, when it comes to feeding nutrients to your bonsai tree, you must always check the instructions provided by the manufacturer. Feeding is also scheduled. Some bonsai trees need regular, yearly fertilization while some monthly. Again, learning about the basic nutritional needs of your tree would be a good idea

### 3) Training your bonsai tree

In bonsai, there is a wide range of techniques applied to shape your tree to make it look how you want it to be. If you want to make a traditional Japanese bonsai, keep in mind the number one rule: when displaying, you never want to leave anything that shows human intervention. The bonsai should look as if it naturally grew into the design. Therefore if you must keep a branch wired make sure to carefully disguise it.

#### *Pruning branches and roots*

Training techniques consist of pruning of branches and roots, leaf trimming, wiring, clamping, and grafting. Branch and root pruning are important because it will define the shape of your tree. Trimming branches will encourage new growth so you can shape it accordingly. On the other hand, trimming the roots will remove diseased roots, shape the root to fit a container or pot and to improve nutrient and water absorption. Trimming the roots and branches require years of practice but no doubt achievable. You also need the right tools to prune like a pair of pruning shears or scissors. Pruning is also scheduled. Most of the time it is done when the tree is at its dormant stage like coniferous trees. But some trees may be pruned any time.

#### *Leaf trimming*

Trimming achieves the ideal shape of your tree. Trimming also encourages new growth of leaves and buds. Leaf structure is very important if you want to achieve a variety of shapes and styles. An example would be a windswept style wherein plumes of leaves only grow on one side of the tree. This shape is achieved by carefully trimming the leaves until you achieve the ideal shape. Basically, you will want to trim all of the larger leaves and branches that are very large to properly train your tree to the ideal shape. When you trim branches try your best to cut close to the main trunk of the tree to make the cut look as natural as possible. As time goes by almost all things will heal and with a little bit of imagination, you can make any injury or mark look natural. After you have your bonsai in

## *How to Wire Bonsai Trees*

You need a healthy, young plant and the ideal wire. Do not be in a hurry because you need to be very careful about wiring your delicate bonsai plant. As you apply the wire, hold the limb in both hands. Bend the wire to the branch and not the branch of the wire to avoid any injury. Always start with the trunk and then move from the thickest branches to the thinnest ones. The key is to bend the wire from the trunk and outwards on the branches or from the trunk to the tip. When you start wiring, place yourself in a comfortable position to give you maximum control over your bonsai. You need to position this way so you can even wrap the wire. Wrap the wire around the limbs of the tree at a 45-degree angle. This should be done like a “barber pole” style. The wire should form the limb and guide it according to the style you wish to achieve. You must anchor the branches to stabilize the part and prevent crossed wires or too much tension on the different limbs. Every time you start wiring, you must start with the trunk and have a strong foundation. This should be anchored on the soil or on a strong root. The tree should feel steady with a moderate amount of movement. Once you have a steady foundation, you can now start wiring the rest of your tree.

- Start wiring at a tight angle as the wire emerges from the ground.
- Wire at a 45-degree angle throughout the trunk and limbs.
- Wire the branches by winding the end of the wire closest to the trunk around the wire that holds the trunk.
- You can adjust the 45-degree angle if the limb has a sharp bend in it. Wind the wire at a smaller angle when you move past the turn. This will provide the additional support.
- You may use the same piece of wire on two branches if these have the same thickness.
- Anchor the wire around the trunk to secure and balance of the bonsai. Never wire branches that have different thicknesses. You must use separate wires for each branch.
- If you have a strong branch, you can use two or three wires winded together to manipulate it.

## *Removing the Wire*

Once the wire has achieved its purpose it may be removed. This is usually done during the same season when it was applied which is the most common practice for moderately-growing trees. The wire should also be removed if it begins to grow into the plant. When removing wires, cut off the wire turn after turn with wire cutters. Do not unwind the wire from the limb or reuse wire. This will cause damage to the plant and even break the branch. Cut the wire at every turn so you can remove the wire without injuring your bonsai tree.

## *Grafting*

One advanced method of training is grafting. This is done by using a clipping from another species of tree. This is inserted into a specially shaped slit on the host bonsai plant. The young plant will be able to take root in the area and soon this can be removed and be grown into a bonsai.

## **Conclusion**

Cultivating bonsai from regular trees is possible when you possess the right skills and have the best tools or materials to use. You also need to be patient with your bonsai plants because it could take a long time for bonsai trees to form and shape. You must learn the basic skills of bonsai growing like trimming, pruning, grafting, shaping, feeding, watering and more. All these will help you care for your bonsai in the best way possible.
